

PRO FINISHED REVOLUTION 4 XC

Outboard Propeller

The all-new Mercury Racing® Revolution 4® XC propeller, designed specifically for single-outboard-powered hulls, features an **extreme** amount of blade **cup**. The enhanced cup enables the engine to be run at elevated transom heights – without sacrificing performance. This is particularly beneficial for flats boats running in skinny water. The larger blade area enables the prop to stay hooked up for quick planing and enhanced performance throughout the engine rpm range. The exhaust tube is designed to support planing and stability at lower speeds. The combination of the extreme cup and custom exhaust tube results in enhanced low speed planing efficiency – a bonus for scouting fish in the shallows.

The stainless steel prop features the Mercury® patented Performance Vent System® (PVS). PVS® enables the user to fine-tune the amount of venting needed for quick planing. The standard length exhaust tube, in addition to reducing the time-to-plane, also provides stern lift for maximum hull performance and an improved ride in a variety of conditions. A majority of Mercury Verado® and Mercury Pro FourStroke applications will use the Revolution 4 XC with all four vent holes plugged with solid PVS fittings.
